Why ADLINK

Innovation Support at Your Fingertips

*Always pioneering
to **empower you with the latest,
cutting-edge technologies***

As a major contributor to open-source standardization, such as PICMG and SGET, ADLINK is always one step ahead to provide you with the latest technologies, including x86, ARM, sensors, middleware, virtualization, artificial intelligence & IoT integration, wireless, 5G, and more.

Committed to accomplishing your innovations, turning concepts into products, ADLINK helps to reduce your time to market and total costs of ownership significantly by offering:

- Utilization of off-the-shelf hardware and software components and enabling connection to all relevant vertical ecosystems
- Hardware modularization and OS abstraction allowing application code reusability
- The best, localized R&D resource support in your language across the globe
- Carrier board design and manufacturing services with redundant production sites
- Regional Advanced SI (signal integrity) labs for convenient, instant on-site validation and certification

Global Carrier Design Service

Don't want to spend time and resources on developing your own carrier boards?

No problem! With ADLINK's global carrier board design service, we can take care of this job for you. Outsourcing a carrier board design to us is fast and cost-effective compared to a full custom solution. We will help you get your product to market in a minimum amount of time and for a fraction of the cost of a full design. Our local R&D teams in Germany and the US are ready to serve you in your own time zone and in your own language.

How we can support you when designing your own carrier board?

Of course, if you decide to design your own carrier boards, we will support you where possible, this starting with the initial design phase and extending to prototype sample testing.

Carrier Design Phase

Get Our Carrier Reference Schematics!

We provide schematics, layout and mechanical files to our customers for all COM form factors, giving you a head start and providing a reference platform to test your carrier against later.

Schematic Review Service

We are ready to help you review your schematics before going to the layout phase.

Pre or Post Layout Simulation

If you're unsure about any high speed signaling and routing lengths in your design, we can support pre layout simulation that will inform you about optimal placement or post layout simulation that will provide you with a high level of confidence that your design will function as intended.

Carrier Prototype Verification

BIOS Modification Service

Signal Integrity Verification

At our headquarters in Taipei, our SI lab is available to help customers with module / carrier signal quality verification. We invite your carrier board engineer to take his board and visit us.

Based on SI reports, he can easily consult module designer on how potential design-to-application barriers could be resolved.

Power Sequence Verification

Even the most advanced LAB testing of your module/ carrier combination can never really cover how end users are going to operate the systems in the field. Especially unforeseen power on and power off operation can lead to hanging systems that in the worst case not recoverable. ADLINK provides a power test procedure called "Monkey Testing" that covers testing of any possible power sequence in the field. If still any mismatches between carrier and modules are found, we can simply update the module by firmware at OS time since its power sequence is MCU controlled.

Core Values

Always Keeping Your Innovations Secured

*Securing each piece of information,
data transmission, and everything in between*

Driven to safeguard client products and data free of cyberattacks and mitigate vulnerabilities, ADLINK has always been at the forefront of the latest security technologies and best-practice infrastructures, for hardware and software alike.

How? ADLINK does so by actively collaborating with a spate of security partners to accomplish its ever-evolving, all-around security mechanisms. These security attributes include, but are not limited to, the following.

Arm	FOUNDRIES	Exset Labs
<ul style="list-style-type: none"> ■ SystemReady compliance ■ Parsec security certification ■ PSA certification 	<ul style="list-style-type: none"> ■ Linux microPlatform ■ Secure for life ■ Deployment, maintenance, OTA 	<ul style="list-style-type: none"> ■ Security pentesting ■ Code hardening ■ Compliance reports

Safekeeping with round-the-clock system monitoring and error logging

With decades of endeavor in administering foolproof security and assurance measures, ADLINK is well aware of the necessity of a developer's application or product to be easily monitored and managed, especially remotely, for timely responses and immediate actions whenever needed.

In this regard, ADLINK is backed by partnerships with the likes of SEMA and Allxon and continues to add to its growing list of partnerships in bringing full-scale remote management and error logging functions, including:

- Varied means of control across different system levels, both in-band and out-of-band
- Real-time monitoring of CPU/GPU performance, memory usage, user access, power consumption, temperature, etc.
- Remote control and updating of the system's varying components, interfaces, and firmware
- Collecting and retrieving system / error logs for event analysis and troubleshooting

ARM SystemReady

*Certified, ensuring generic OSs
to 'just work' right off the shelf*

arm SystemReady

With uncompromising efforts in delivering a seamless development experience, ADLINK has been an active participant in the Arm SystemReady compliance certification program since its launch in 2020.

By proactively contributing to and meeting Arm SystemReady standards, ADLINK ensures that generic off-the-shelf operating systems 'just work' – enabling generic operating systems, and

subsequent layers of software, to work out of the box on Arm-based hardware.

ADLINK eliminates the need for custom-engineered firmware, thus significantly reducing both the cost and time to market for Arm-based hardware, including infrastructure edge and embedded IoT systems.

Arm SystemReady IR for embedded devices

Find ADLINK products with the Arm SystemReady IR band stamp, which ensures Arm-based embedded devices supported by mainline Linux/BSD suiting both custom and prebuilt operating system images.

- For embedded Linux ecosystem
- Mainline Linux support for SoC
- Suiting custom (Yocto, OpenWRT, buildroot) and prebuilt (Debian, Fedora, SUSE, Ubuntu) system images

Arm SystemReady SR for servers & workstations

Find ADLINK products with the Arm SystemReady SR band stamp, which ensures Arm-based servers or workstations to offer seamless interoperability with standard operation systems, hypervisors, and software, i.e. Windows, VMware, Linux, and BSD.

- For Windows, VMware, Linux, and BSD ecosystem
- Supporting old OSs to run on new hardware and vice versa
- Suiting generic off-the-shelf OSs

Extreme Rugged

Our Extreme Rugged boards are designed for harsh environments from the ground up. To support the extremes of shock, vibration, humidity and temperature, care is given to component selection, circuit design, PCB layout and materials, thermal solutions, enclosure design, and manufacturing process. Robust test methods, including Highly Accelerated Life Testing (HALT), ensure optimal product design phases and meet stringent requirements such as -40°C to 85°C operating temperature range, MIL-STD, shock & vibration, and long-term reliability.

Open-source Prototyping

I-Pi

*The 1-stop solution to prototyping
your edge, IoT innovations
rapidly and conveniently*

Explicitly for open-source developing, ADLINK has established its I-Pi wiki, a website and 1-stop service for any software developer, novice or professional, to transform their embedded ideas into real-life applications.

From designing to prototyping and evaluating, visit <https://www.ipi.wiki/> now to get started with the development kit of your choice delivered right to your doorsteps.

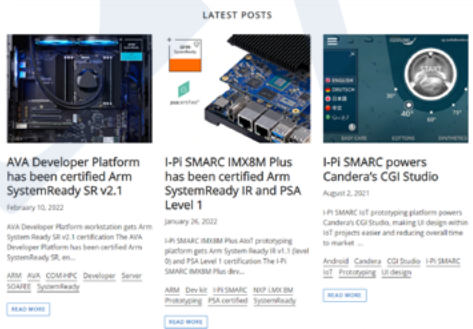

Readily-accessible [online help](#) and [technical support forums](#) are also provided on I-Pi wiki just 1 click away.

Development kits currently available include I-Pi SMARC RB5, I-Pi SMARC IMX8M Plus, I-Pi SMARC Elkhart Lake, COM Express Type 6 Alder Lake-P, COM Express Type 10 Elkhart Lake, Ampere Altra Developer Platform, and more.

Browse for industrial development delivered right to your doorstep

Stay posted with I-Pi blogs for the latest technology trends

Readily accessible online help (DOCS+) and forums for on-the-spot tech support

Starter Kits

Simply *lower costs* and
accelerate your development processes

As a worldwide leader in Computer-on-Modules, ADLINK understands the developers' needs for affordable and comprehensive development kits.

ADLINK offers an extensive collection of Starter Kits, including for COM-HPC, COM Express, and SMARC, in aiding engineers and system integrators to reduce their products' time to market and accelerate project schedules.

Reference Carrier Boards

Instantaneous *evaluating module capabilities*
for application prospects

In addition to starter kits, ADLINK also offers a wide variety of Reference Carrier Boards.

Using a reference carrier board, developers can emulate the functionalities of their desired end products against the selected COMs for software development and hardware verifications instantly.

(95 x 120mm)

Size B
(120 x 120mm)

Size C
(160 x 120mm)

Type 6 Basic
(125 x 95mm)

Type 6 Compact
(95 x 95mm)

Type 7 Basic
(125 x 95mm)

Type 10 Mini
(84 x 55mm)

COM-HPC is the new PICMG standard for high-performance Computer-on-Modules. It aims to drive the newest breed of embedded edge servers with limitless scalability for today and tomorrow.

COM-HPC supports up to 64 general-purpose PCIe Gen4 or Gen5 lanes, eight 25GbE ports, and a maximum of four USB 4 ports. The COM-HPC specification defines 5 different module sizes, with the larger Size D and E (Server Type) serving next-gen headless edge servers and accommodating up to 8 DIMMs. In contrast, the smaller Size A, B, and C (Client Type) targets visual-oriented client platforms utilizing SO-DIMMs, or soldered onboard memory, and supporting up to 4 video displays.

COM Express, defined by PICMG, is the most widely adopted COM standard and is based on serial interfaces including PCI Express, SATA, USB, LVDS/eDP, and DDI. It allows designers and system integrators to utilize the latest technologies with straight off-the-shelf modules of varied sizes for their edge applications. ADLINK has heavily invested in the development and maintenance of the PICMG® COM Express® specification since its creation.

Revision 3.1

As a chair of the PICMG subcommittee, ADLINK has helped to define the COM Express COM.0 Revision 3.1. This revision upgrades the Type 6 and 7 definitions with several new interface support, such as USB 4, PCIe Gen4 on the Type 6 and 10G CEI-mode Ethernet on the Type 7.

Short size
(82 x 50mm)

(70x70mm)

ADLINK has been a pioneer in the development of the SMARC specification — a business-card-sized Computer-on-Module targeting ultra-low power ARM- and x86-based embedded applications. SMARC's 314-pin edge connector not only provides access to commonly found low-level interfaces, such as I2C, I2S, UART, CAN, SPI, and GPIO, but also fully supports more complex I/O including LVDS, HDMI, DP, eDP, GbE, USB 3.x, PCIe, and SATA. There's no question why SMARC is the fastest growing product line in the embedded COM market today.

Revision 2.1

With Revision 2.1, SMARC establishes itself as the very first open specification of AI on Module (AIOM). By adding support for up to 4 MIPI CSI camera inputs and 4 GbE Ethernet ports by multiplexing SerDes, it is now readily compatible with NPU-integrated SoCs and can utilize up to 4 GigE Vision cameras for various video-based and AI-vision applications.

Qseven® is a versatile, small Computer-on-Module standard. With its 230-pin edge connector, it mainly focuses on traditional low-power x86 Intel Atom® designs. Since Qseven is not able to support all modern interfaces and has only partial coverage for ARM features, there has been an eminent, accelerated migration of low-power COM projects from Qseven to SMARC.

(114 x 95mm)

ETX®, one of the oldest Computer-on-Module specifications, supports legacy interfaces such as ISA bus, Parallel ATA (IDE), and PS/2 keyboard/mouse. ADLINK is highly committed to this product line and is one of the only vendors that offers customers a migration path for ETX even beyond 2025.

COM+HPC[®]

COM-HPC

COM-HPC is the new PICMG standard introduced by PICMG to complement COM Express in response to the ever-evolving digital transformation. Providing standards for two module types – Server Type and Client Type – COM-HPC offers substantially higher data bandwidths for delivering superior I/O performance while featuring high-performance computing and high-speed transmission with limitless scalability.

Server Type Pin Definition

Aimed for next-gen headless edge servers, COM-HPC Server Type features up to 64 general-purpose PCIe Gen4 or Gen5 lanes, eight 25GbE ports, and can accommodate up to 8 DIMM slots. Additionally, it provides the IPMB function for convenient out-of-band monitoring and management. COM-HPC Server Type is suitable for both ARM and x86 architectures.

COM Express

COM Express

Type 6 Basic Size

Transforming your everyday edge computing

COM Express Type 6 Basic size is the most popular and widely used form factor on the market. With two COM Express connectors and pinouts closely similar to the common x86 based silicon, the Type 6 Basic size yields up to 75 watts, making it well-fitted for various embedded computing applications, including medical, gaming, test & measurement, industrial automation, and more. Topping off, its latest revision – R3.1 – has also added support for several advanced interfaces, such as PCIe Gen4 and USB4.

COM Express

COM Express

Type 6 Compact Size

Significantly lowered power envelopes

COM Express Type 6 Compact size, shorter in length than the Basic size, is ideally suited for single-chip x86 SoCs, and features proficient performance at significantly lowered power envelopes of 5 to 30 watts. COM Express Type 6 Compact size targets mid- to entry-level applications such as transportation, robotics, edge servers, industrial control, and HMIs in a spate of industries.

COM Express

COM Express

Type 7 Basic Size

Serving servers with extended operating temperatures

A fundamental innovation in COM interfaces, COM Express Type 7 Basic size, designed for intermediate- to high-performance headless edge servers, offers up to 32 PCIe lanes and four 10GbE ports with an extended temperature tolerance. As of late, its suitability for a wide range of rugged and embedded industrial applications has been widened further with Revision 3.1, which adds a second PCIe clock for **PCIe Gen4**. The range of applications for Type 7 modules is very broad, including general-purpose rugged embedded computers, mission-critical servers, SDN appliances, signal processing & data acquisition appliances, network test equipment, satellite gateways, inflight entertainment systems, and more.

Data Communication

The Type 7 Starter Kit Plus consists of a COM Express® Type 7 module with ATX size Type 7 reference carrier board that offers one PCIExpress x16 slot with proprietary pinout for a 10GbE adapter card that convert a 10GBASE-KR to 10GbE Optical Fiber or 10GbE Copper signal, one PCIExpress x16 slot, two PCIExpress x8 slots, Serial ATA, USB 3.0/2.0, GbE and Super I/O. In addition, an IPMI board management controller (miniBMC) located on the carrier board connects to the COM Express Type 7 module by NC-SI interface to support out-of-band management features. All necessary cables are included.

Management Bus	I2C, SMBus
Embedded Features	EAPI/SEMA, Backup BIOS, Debug/JTAG
Power Supply	4.75-20V / 5Vsb ±5% (ATX), 4.75-20V (AT)
Operating Temperature	Standard: 0°C to 60°C Extreme Rugged: -40°C to 85°C (standard 12V input only)
OS support	Windows® 10 64-bit, Yocto Linux 64-bit, VxWork 64-bit (TBC)
Form Factor & Compatibility	PICMG COM.0 R3.0 Type 10 Mini size: 84 x 55 mm

Notes:

- TPM, eMMC support by BOM option
- Optional -40°C to 85°C support: Standard product with 100% ETT screening available for selected CPU SKUs and std. 12V power supply only
- All specifications are subject to change without further notice.

- Optional -40°C to 85°C support: Standard product with 100% ETT screening available for selected CPU SKUs and std. 12V power supply only
- All specifications are subject to change without further notice.

SMARC

Covering ARM / x86 ecosystems

Short for Smart Mobility ARChitecture, the SMARC form factor is the only standard natively built for both ARM- and x86-based SoCs, allowing it to leverage the wide-ranging smart phone and tablet computer ecosystems. With 314-pins on a high-speed MXM3 connector, SMARC delivers a combination of high-performance computing, low power envelopes typically under 6W and no more than 15W, low cost, and the ability to withstand extreme environmental conditions, making it the ideal building blocks for portable and stationary embedded systems.

AIoM (AI on Module)

With the latest Revision 2.1, SMARC has positioned itself as the ideal standard for scalable, low-power, silicon-independent AIoM solutions in the industrial embedded market. Over the revision, SMARC adds the support for up to 4 MIPI CSI camera inputs specifically for SoCs with integrated NPUs (Neural Processing Units) used for video-based AI solutions, such as robotic vehicles and autonomous driving. Additionally, it also allows multiplexing SerDes signals over two PCIe x1 interfaces for a total of four GbE Ethernet ports to support up to 4 GigE Vision cameras for AI vision applications.

Pin Definition for SMARC

2x LVDS / DSI / eDP
HDMI / DP++
DP++
2x MIPI CSI
HDA / I2S
1x SATA
2x GbE
2x USB 3.0/2.0 (1x OTG) 4x USB 2.0 (1x OTG)
4x PCIe
SDIO / SPI / eSPI / 5x I2C 4x UART / 2x CAN / 12x GPIO
Power

I-Pi SMARC Development Kits

ADLINK offers various out-of-the-box-ready development kits for developing, referencing, and prototyping your tailored, SMARC-driven applications. Visit <https://www.ipi.wiki/> for more details and one-click purchase and shipping.

Qseven

Qseven® is an off-the-shelf, multi-vendor, computer-on-module that integrates all the core components of a typical PC packed in a slim design, to be mounted onto an application-specific carrier board. Its single ruggedized 230-pin MXM2 connector offers all the I/O interfaces necessary for mobile / ultra-mobile embedded applications, such as graphics, sound, mass storage, and networking, at power envelopes usually between 6 and 12 watts. Since its pinouts are mostly x86 x86-oriented, Qseven® is commonly built around "Atom level" x86 silicon.

Pin Definition for Q7

2x LVDS / DSI / eDP
HDMI / DP++
2x MIPI CSI
HDA / I2S
2x SATA
GbE
2x USB 3.0/2.0 (1x OTG) 4x USB 2.0 (1x OTG)
4x PCIe
SDIO / SPI / LPC or GPIO 5x I2C / 2x UART or CAN
Power

Q7-AL

SoC	Intel Atom® E3900 Series, Pentium® N4200 or Celeron® N3350 (formerly "Apollo Lake")
Memory	Up to 8 GB LPDDR4 at 2400 MHz
Cache	L2: 2 MB
BIOS Type	AMI UEFI BIOS
Integrated Graphics	9th Gen Intel® graphics core architecture with up to 18 execution units, supports three independent displays, 4k video (up to 4096 x 2160 @60fps)
Graphics Features	DirectX 12, OpenGL 4.2, OpenCL
Camera	2x MIPI CSI 2L/4L
LAN	Intel® i210IT MAC/PHY, 1x GbE, IEEE 1588
USB	2x USB 3.0 6x USB 2.0
Serial ATA	2x SATA 6Gb/s to carrier or 1x SATA 6Gb/s to carrier and 1x onboard SATA SSD
PCI Express	3x PCIe x1
eMMC (opt.)	Onboard eMMC 5.0 (4-64 GB)
Audio	HDA
SEMA	Yes
Power Supply	Module Input Voltage: 5.0V Power Pins: 12 pins, 6A at 5V Typical IO Voltage: 3.3V
Operating Temperature	0°C to 60°C -40°C to 85°C
OS Support	Windows 10 IOT Enterprise, Windows 10 IOT Core, Yocto Linux
Form Factor & Compatibility	Qseven 2.1, Size: 70 x 70 mm

Notes:

- All specifications are subject to change without further notice.

ETX[®]

ETX

Legacy beyond 2025

ETX[®] is one of the earliest successful computer-on-module form factors. Today it is still widely used in applications such as industrial automation, transportation and medium and low level medical appliances. While high-end Intel[®] Core[™] applications have mostly migrated to COM Express, ETX[®] is still prominent in the lower power segment, mostly notably using Intel[®] Atom[®] SoCs. Specifically, customers who have heavily invested in ISA and PCI controllers or peripheral technologies still pose great demand for ETX[®] through the years. To this extent, ADLINK is providing long-term support for ETX[®] well beyond 2025.

Pin Definition for ETX

X1	X2
4x USB 2.0/1.1	8/16-bit ISA
32-bit PCI-bus	
HD Audio	
X1	X2
Analog VGA	2x PATA
Dual LVDS	2x SATA
PS2 MS/KB 2x UART, LPT1	I2c/SMBus
	10/100 Mbps Ethernet

ETX-BT

SoC	Intel Atom® E3800 series Celeron® N2930/J1900 (formerly "Bay Trail")
Memory	Up to 8GB DDR3L at 1333/1066MHz
Cache	L2: 512 kB to 2MB
BIOS Type	AMI Aptio EFI
TPM (opt.)	Atmel AT97SC3204
Graphics Features	LVDS, DisplayPort, VGA Decode: H.264, MPEG2, MVC, VC-1, WMV9 and VP8 Encode: H.264, MPEG2 and MVC DirectX 11, OCL 1.1, OGL ES Halt/2.0/1.1, OGL 3.2
LAN	Intel® i211 MAC/PHY, supporting 10/100 Mbps (GbE via onboard connector)
USB	4x USB 2.0
PATA (IDE)	2x
SATA	2x SATA 3Gb/s
Audio	Integrated on E3800 SoC, Realtek ALC 262
SEMA Support	Yes
Power Supply	5V±5% / 5Vsb ±5% (ATX) 5V±5% (AT)
Operating Temperature	0°C to 60°C -40°C to 85°C (opt.)
OS Support	Windows 7/8 Linux (WES7, WE8 Std., WEC7; Linux, VxWorks)
Form Factor & Compatibility	ETX 3.02 Size: 95 x 114 mm

Notes:

- All specifications are subject to change without further notice.
