EA OLED SERIES

With its EA OLED series ELECTRONIC ASSEMBLY launched worldwide the first display family with OLED-technology for direct mounting and soldering. In comparison to standard displays there's no FFC/FPC cable/connector that may lose contact, this OLED series will be soldered directly or put into a standard 2.54 mm precision socket.

It is designed for compact handheld equipment and provides a lot real advantages:
- Extreme compact with a large viewing area
- Super flat with 2.4 mm (without frontal protection glass)
- SPI and I²C interface
- Simple mounting with direct soldering
- Ex stock available from 1 pc. off
- Long life time (>50,000h for yellow)
- Wide temperature range (-40..+80°C)
- Fast response time (10µs), no afterglow

VERSIONS

The EA OLEDS102-6 is available in 3 different versions:

EA OLEDS102-6GGA / Allround

This module is perfect for rough environment. An additional frontal glass protects the display against scratch, shock and UV light. Thanks to its integrated polariser there's no need for an additionally smoked glass.

EA OLEDS102-6LGA and -6LWA / Flat

This module is the standard module and does fit for the most applications. The flat design (2.4 mm) makes the display perfect for smallest equipment. The background is always deep black for best contrast.

COLORS (CUSTOM MADE)

The standard colors are yellow and white.

The flat version EA OLEDS102-6LGA is on customers request available in 3 more colors. The minimum order quantity is 10,000 pcs., lead time is about 20 weeks. Samples are available on request.

Interface and software are 100% compatible. The yellow color provides highest brightness and longest life time.

DATA TRANSFER 4-WIRE SPI (8 BIT)

Data transmission for SPI is unidirectional, that means that data can only be written, there's no data read option. Selection for writing data or command is done with the D/C line. A busy check is not necessary at all. Clock rate may be up to 10 MHz. Data transmission is based on SPI mode 3, MSB first. For more details please refer to the controllers data sheet SSD1306B.
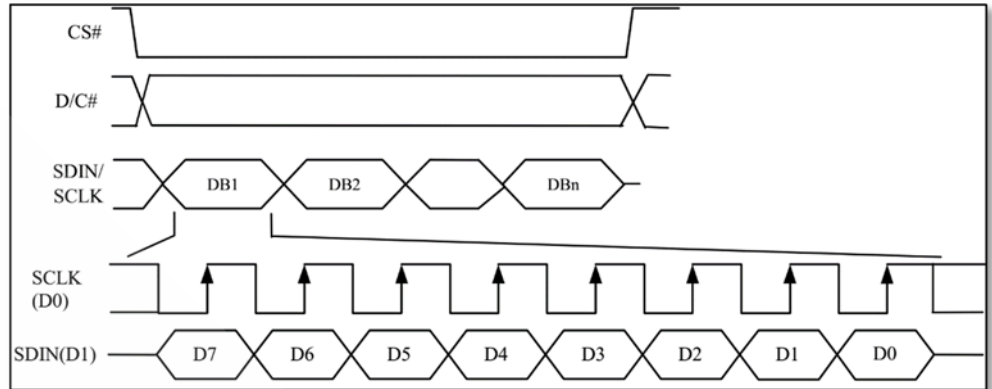

# DATA TRANSFER 3-WIRE SPI (9 BIT)

Data transmission for SPI is unidirectional, that means that data can only be written, there's no data read option. Selection for writing data or command is done with the first bit of the 9 bit data transfer. A busy check is not necessary at all. Clock rate may be up to 10 MHz. Data transmission is based on SPI mode 3, MSB first (9 bit). For more details please refer to the controllers data sheet SSD1306B.
DATA TRANSFER I²C

The I²C mode provides a bi-directional data transmission: That means that data can be written and read. With the pin SA0 the I²C address can be changed (L: 0x78 or 0x3C, H:0x7A or 0x3D). So up to 2 displays may be driven on 1 bus. The clock rate may be up to 400 KHz. Please make sure when defining the pull-up resistors that the internal resistance of the display is 600..1000 Ω. This affects the low level when reading data and ACK bit.

Attention: When reading data, after the command for page- or column address there need to be a dummy read (discard the first byte).

Control byte: C_o (Continuation bit) = 0 → Display data do follow; 1 → refer D/C bit

ACCESSORY: SOCKET EA FL-14P

Using a 14-pin socket makes the display replaceable and adapts the height. Those socket may also be soldered automatically by wave soldering or reflow process. Each display requires 2 pcs.

ACCESSORY: ZIFF CONNECTOR EA WF100-04S

The ZIFF connector matches perfect to the touch panel EA TOUCH128-1. It provides 4 pins with 1.0 mm pitch. Connection is bottom contact.
Top contact version is called EA WF100-04T.

Page 7
ACCESSORY: TOUCHPANEL EA TOUCH102-1

As an accessory there is an analogue touchpanel available. It comes with a self-adhesive glue on its rear side. Connection is done via FFC, pitch 1.0 mm. Any standard ZIFF connector can be used (e.g. EA WF100-04S). Bending radius is minimum 5 mm. Interfacing to a processor can be either done by an external touch panel controller or with a controller that is featured with analogue input. The touch panel is similar to a potentiometer: connecting a voltage of e.g. 3.3 V to the pins Top-Bottom makes it possible to read out a voltage on pin Left or Right which is linear to the Y-coordinate of the pressed point. The X-coordinate will result when the voltage will be supplied to Left-Right and measurement is done at Top or Bottom. The pinout of the connecting cable is shown in the drawing. For connection there is a ZIF connector with pitch 1 mm, e.g. EA WF100-04S.
Only in combination with the EA OLEDS102-6GGA.

TOUCH PANEL EA TOUCH102-17C1 (PCAP, CAPACITIVE)

As an accessory we provide a suitable, capacitive touch panel (PCAP). It comes already with controller (GT5663) and integrated I²C bus. It supplies the coordinates in double resolution 204x128. The line INT shows, if data are available to be read out. The I²C bus address is 0xBA (0x5D). For connection there is a ZIF connector with pitch 1.0 mm, e.g. EA WF100-06S.
