

Digi ConnectCore Cloud Services

Integrated edge-to-cloud connectivity

Digi ConnectCore® Cloud Services enable OEMs in a wide range of industries to create connected devices with remote-dashboard, -service and -application capabilities using Digi ConnectCore system-on-modules (SOMs).

Shaped from our renowned experience and knowledge, Digi ConnectCore Cloud Services are proven and reliable, taking advantage of technologies built into **Digi Remote Manager®** and thoroughly verified over the last decade.

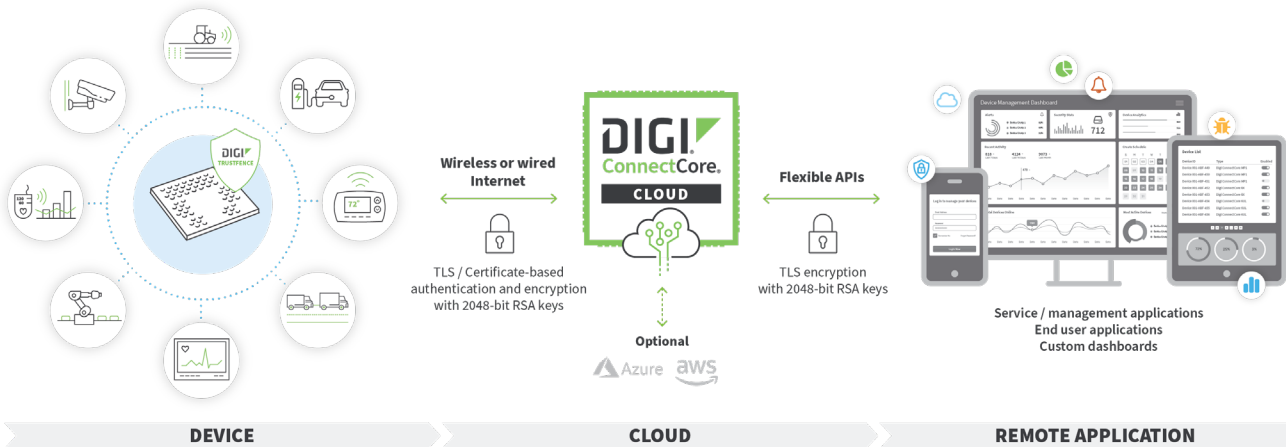

Digi ConnectCore Cloud Services are designed to create custom interfaces that provide valuable features such as the ability to remotely configure, monitor and maintain connected devices.

Combine proven, reliable and off-the-shelf hardware and software with Digi ConnectCore Cloud Services to enable over-the-air software updates. With these capabilities, you can automate more processes, remotely manage your deployment, and reduce costs.

Digi ConnectCore Cloud Services empower customers to create innovative and effective service plans built on the Digi ConnectCore solution.

With integrated edge-to-cloud connectivity, customers improve their product quality and ease-of-use, as well as the technical support they provide to their end users.

Connect your device and create your IoT application with Digi ConnectCore Cloud Services

DIGI CONNECTCORE Cloud Services

Digi ConnectCore Cloud Services provide the essential tools and functionality you need, with options for advanced capabilities and premium features for scaling your network and services over time, to create your perfect solution. Digi ConnectCore Cloud Services Essential and Premium plans are available in 1-, 3- and 5-year subscriptions supporting Digi ConnectCore 6, 8 and MP1 SOM families.

Services / Level	Essential	Premium
Remote OTA Firmware Updates Update your devices over-the-air with the latest firmware through the cloud	✓	✓
View and Group Devices View and add devices to a group to logically organize and manage them	✓	✓
Update Devices in Bulk Multi-select devices and load firmware update files onto them	✓	✓
Device Requests Send a custom request from the cloud to a device to perform a specific action	✓	✓
Automated Operations Schedule and automate operations to streamline common tasks on devices or groups of devices	✓	✓
API Access Access the complete functionality through web service APIs and integrate into custom applications	✓	✓
File System Access Use the file management system to access and load files onto your devices		✓
Custom Data Stream Store time-series data that can be retrieved later by an application using web services		✓
Alarms and Alerts Configure alarms and alerts to trigger based on health metrics, status, usage and other factors		✓
Subaccounts Create additional subaccounts within a parent account with access to a subset of devices		✓
Remote CLI Utilize the command line interface remotely to configure and manage devices		✓
System Monitoring Monitor devices and produce reports for usage, firmware, health metrics and other data		✓

Example Industries and Applications

Smart Energy

Smart Agriculture

Medical Devices

Connected Factory

DIGI CONNECTCORE Cloud Services

Complete system-on-module solution

Digi ConnectCore SOM solutions provide a highly integrated hardware and software platform that supports rapid development and time-to-market, with a full suite of tools and services for scalability of design and ease of maintenance. With robust, industrial system-on-modules, integrated **Digi TrustFence** security, sophisticated open systems software and device management tools, Digi's embedded solutions reduce total cost of ownership and help catapult OEMs to market success.

Manage your network and connected devices from edge-to-cloud

- ✓ Industry-leading cloud and edge tools for rapid device deployment, and easier asset management
- ✓ Automate mass firmware and software updates to enhance functionality, stay in compliance and scale your deployment
- ✓ Access data from edge devices that were previously out of reach
- ✓ Integrate device data through open APIs to gain deeper insights and control with third-party applications
- ✓ Monitor network, device, and asset performance and security with bi-directional communications
- ✓ Receive real-time alerts and detailed reports on network health and device conditions
