1. Open circuit inductance (OCL) Test parameters: 100 kHz, 1.0 V_{rms}, 0.0 Adc, +25 °C

2. I_{rms} : DC current for an approximate temperature rise of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +125 °C under worst case operating conditions verified in the end application.

3. I_{sat} : Peak current for approximately 20% rolloff @ +25 °C

4. Part Number Definition: HFWxVxxxxHxxxK

HFW1V2210H = Product code and size,

xxx= inductance value in μ H, R = decimal point, if no R is present then third digit equals number of zeros,
