

# UP SERIES

Along with 6 W, 12 W and 18 W cast devices, the flush-mounted range includes the UP USB. This power supply unit features two USB interfaces in one standard socket, allowing you to charge a broad range of home and office devices directly from the wall, while reducing the need for additional chargers and annoying tangled cables.

All the devices in the UP range have a 90 to 264 V AC wide range input, making them suitable for use anywhere in the world. The devices are protection class II compliant, voltage controlled, current-limited and continuously short-circuit-proof, which means they offer a high level of operational safety combined with a long operational life.

They also comply with the latest guidelines. Thanks to idle consumption of = 300 mW and high efficiency at every power level, the units comply with the current threshold values of various energy efficiency programs, such as Energy Star, MEPS or ErP.

**Flush-mounted power supply units with custom outputs or special leads are also possible on request.**
