## General information

### Storage and handling

The shelf life will be a minimum of 12 months, when stored at the following conditions: < 40 °C, < 90% relative humidity.

### Wave solder profile

The wave solder profile is measured based on lead temperature. The internal temperature of the solder parts should not exceed +210 °C. The duration of solder dwell time should be between 3 to 5 seconds, and not to exceed 10 seconds.
